

CRUISE REPORT

Cruise Number: MF-03-11

FOCI Number: 7MF03

Ship:

NOAA Ship Miller Freeman

Area of Operations:

Gulf of Alaska

Itinerary:

Date depart / port: September 7, 2003 / Kodiak, AK
Date arrive / port: September 21, 2003 / Kodiak, AK

Participating organizations:

NOAA - Alaska Fisheries Science Center (AFSC)
7600 Sand Point Way N.E.
Seattle, Washington 98115-0700

Joint Institute for the Study of the Atmosphere and Ocean (JISAO)
University of Washington
Box 354235
Seattle, Washington 98195-4235

Chief Scientist:

Matthew T. Wilson M / AFSC
(206) 526-6522
Matt.Wilson@noaa.gov

Personnel:

| | |
|---------------------|-----------|
| Annette Brown | F / AFSC |
| Andre Buchheister | M / AFSC |
| Lisa DeForest | F / AFSC |
| Chrissy Deliyanides | F / AFSC |
| Jennifer Lanksbury | F / AFSC |
| Steve Porter | M / AFSC |
| Boeing Wiebke | F / JISAO |

Cruise Objectives:

The late-summer FOCI cruise is designed to address biological and methodological questions regarding juvenile walleye pollock and other forage fishes in the western Gulf of Alaska. The primary cruise objective is to map the density of smelts and juvenile pollock over an area of high environmental heterogeneity, and to relate variations in fish density with environmental variability to provide some insight regarding habitat suitability. Preliminary findings indicate that at least young pollock are best sampled in the midwater at night. Therefore, to accomplish the primary objective, nighttime samples of these fishes, their prey, and water temperature and salinity will be collected at 43 grid stations between Shelikof Strait and the Shumagin Islands. These stations, many of which were sampled during September of 2000 and 2001, are situated along ten acoustic transects and form a grid from near shore to the outer shelf. Transits between stations will emphasize the collection of acoustic data along these transects; acoustic data will be collected continuously throughout the cruise.

Secondary cruise objectives include: 1) re-occupy night stations and acoustic transect segments during daylight for diel comparison, 2) extending coverage of the grid with additional daytime sampling and transecting, 2)

opportunistically sample patches of acoustic backscatter with nets to boost samples collected from locations of high fish density and to help decipher the acoustic data, 3) collect piscivorous fishes for preliminary indication of predation on smelts and juvenile pollock, and 4) fulfill an assortment of special study requests.

Summary of Operations:

| Operation (successful or not) | Tows |
|--------------------------------------|-------------|
| Anchovy trawl (Ancho) | 77 |
| Seabird SeaCAT CTD (CAT) | 82 |
| CTD without bottle samples (CTD) | 2 |
| CTD with bottle samples (CTDB) | 1 |
| Shrimp Trawl (Shrimp) | 6 |
| 1m ² Tucker trawl (Tuck1) | 83 |

Samples Collected

| | Tows | Number |
|---|-------------|---------------|
| Age-1 pollock collected for diet study (A-Gut) | 9 | 37 |
| Age-1+ pollock length measurements (A-Length) | 28 | 713 |
| Samples for capelin genetic study (Cap-Gen) | 6 | 115 |
| Capelin collected for diet study (Cap-Gut) | 47 | 1006 |
| Capelin length measurements (Cap-Leng) | 46 | 1691 |
| SeaBird 19 SeaCat CTD (CAT) | 82 | |
| SeaBird 911+ CTD (CTD) | 3 | |
| EK500 data collected during transect (EK500) | 199 | |
| Eulachon collected for diet study (Eul-Gut) | 36 | 1120 |
| Eulachon length measurements (Eul-Leng) | 36 | 1562 |
| Eulachon sample for M. Busby (Eul-Mbus) | 3 | |
| Eulachon collected for shrinkage study (Eul-Shr) | 11 | 132 |
| Furuno attached to net (Furuno) | 80 | |
| Juvenile pollock collected for diet study (J-Gut) | 59 | 2044 |
| Age 0 pollock J. Duffy-Anderson for isotope study (J-Iso) | 13 | 720 |
| Juvenile pollock length measurements (J-Length) | 58 | 4150 |
| Juvenile pollock prey caloric density study (J-Prey) | 16 | |
| Sample for F. Morado parasite study (Morado) | 8 | 375 |
| Pollock larvae or egg predator collections (Pred) | 14 | 457 |
| Quantitative tow preserved in formalin (QTowF) | 135 | 151 |
| SeaBird 39 (SBE) | 79 | |
| Forage species A. Springer (Springer) | 33 | |

Summary of Cruise:

Narrative:

NOAA ship *Miller Freeman* departed Kodiak on 7 September (15:00 ADT) and returned 21 September (08:00 ADT). The primary and secondary objectives were largely fulfilled by successful collection of plankton and fish samples, and physical and acoustic data at 37 of the 43 pre-determined locations and along the acoustic transects that define the sampling grid. Six pre-determined locations were not sampled due to bad weather and time constraints. Two locations were opportunistically sampled due to high acoustic backscatter. All of the collections are referenced by station and haul numbers. Station number is used to group all temporally consecutive operations that occurred within 0.5 nmi of a specific geographic point (grid or opportunistic location). Although most locations were sampled at day and night (night was ca. 21:45 - 07:00 ADT, day was ca. 0:00 – 21:00 ADT), these operations were rarely consecutive. Thus, two station numbers are usually associated with each specific geographic sampling location. Haul number indicates the chronological order of operations within each station number. All collections are listed chronologically in Table 1; a tally of all collections, successful or not, are tallied in the preceding Summary of Operations.

Occupation of the grid began in the afternoon on September 8 at the grid coordinate 1C. Enroute to this location, fish samples were collected at three stations (10D, 10E, and 9D) that were again occupied at the end of the cruise, these data will provide an indication of the increase in fish size during the cruise. Once at Transect 1, the sampling generally proceeded back and forth along each transect prior to moving northeastward to the next transect. Moving back and forth along each transect maximized the amount of along-transect acoustic data collected. Time constraints made it necessary to drop most Transect-2 and Transect-4 stations during this northeastward sweep to ensure successful sampling of the northeastern part of the grid. As it turned out, we were able to break our occupation of the northeastern transects to return and occupy most of the Transect-4 locations. From Transect 4, we occupied 9C and 10C at night before breaking off scientific operations on the morning of 20 September.

Overall, 164 successful operations were made at 45 different locations throughout the sampling grid, this does not include continuous underway collections made with the Simrad acoustic system (38, 120, and 200 kHz) and the thermo-salinograph. The primary cruise objective was achieved by successfully completing 31 pairs of nighttime operations. Each pair consisted of a Tucker trawl tow (plankton collection) and an anchovy trawl haul (fish collection); thus, the 31 pairs represent 62 separate sampling operations. The Tucker trawl was equipped with a SBE CTD profiler (SeaCat 19) to provide concurrent temperature and salinity profiles. These operations will enable 31 of the 43 pre-determined locations to be included in the primary study. Incidentally, the SBE 911+ CTD was used at three locations to confirm adequate performance of the SeaCat. All remaining operations addressed secondary cruise objectives:

- 1) The highest priority secondary objective was to obtain material enabling diel comparison of plankton and fish catches, diel comparison of acoustic back scatter along transects, and to extend coverage of the grid. Thus, daytime was primarily used to re-occupy nighttime sampling and transect locations, and to extend coverage of the grid. Daytime sampling was conducted at every nighttime sampling location, and an additional six locations were sampled. As during night, each of these day sampling events consisted of a pair of operations involving the Tucker trawl and the anchovy trawl. Overall, sampling during the day for this purpose resulted in 77 successful operations.
- 2) Additional time was also used to opportunistically fish the anchovy trawl at each of four locations where the acoustic backscatter was relatively high; hence, four additional operations.
- 3) Other secondary operations included
 - a. One initial Tucker trawl as a shakedown tow,
 - b. Three anchovy trawl hauls to collect age-0 pollock from stations 10D, 10E, and 9D prior to occupying the grid to estimate fish size increase during the cruise,
 - c. Six shrimp trawl hauls to collect piscivorous fishes for preliminary indication of their impact on smelts and age-0 pollock, and
 - d. Eight Tucker trawl tows to obtain zooplankters for caloric density determination.

Days Lost to Weather:

0.3

Days Lost to Equipment Failure:

None

Recommendations:

None

Acknowledgments:

The scientific party would like to acknowledge the hard work and support of the officers and crew of NOAA ship *Miller Freeman*. All operations were completed with an admirable degree of efficiency and professionalism that is to be commended.

Attachments:

Table 1: Cruise summary statistics for MF03-11 (FOCI 7MF03).

Figure 1: Sampling locations occupied during the cruise MF03-11 (FOCI 7MF03). Station numbers along each transect are offset from their actual coordinates according to the diel period in which the station was occupied: station numbers of day operations are shifted slightly northeast of their true position, night stations are southwest, and twilight stations are not shifted.

Figure 2: Eight acoustic transects occupied during the cruise MF03-11 (FOCI 7MF03). The thin solid line indicates transect location, the thick offset lines indicate where acoustic data were collected during the day (dashed line) or at night (solid line). Alphanumeric symbols indicate grid station location.

Figure 1. Sampling locations occupied during the cruise MF03-11 (FOCI 7MF03). Station numbers along each transect are offset from their actual coordinates according to the diel period in which the station was occupied: station numbers of day operations are shifted slightly northeast of their true position, night stations are southwest, and twilight stations are not shifted.

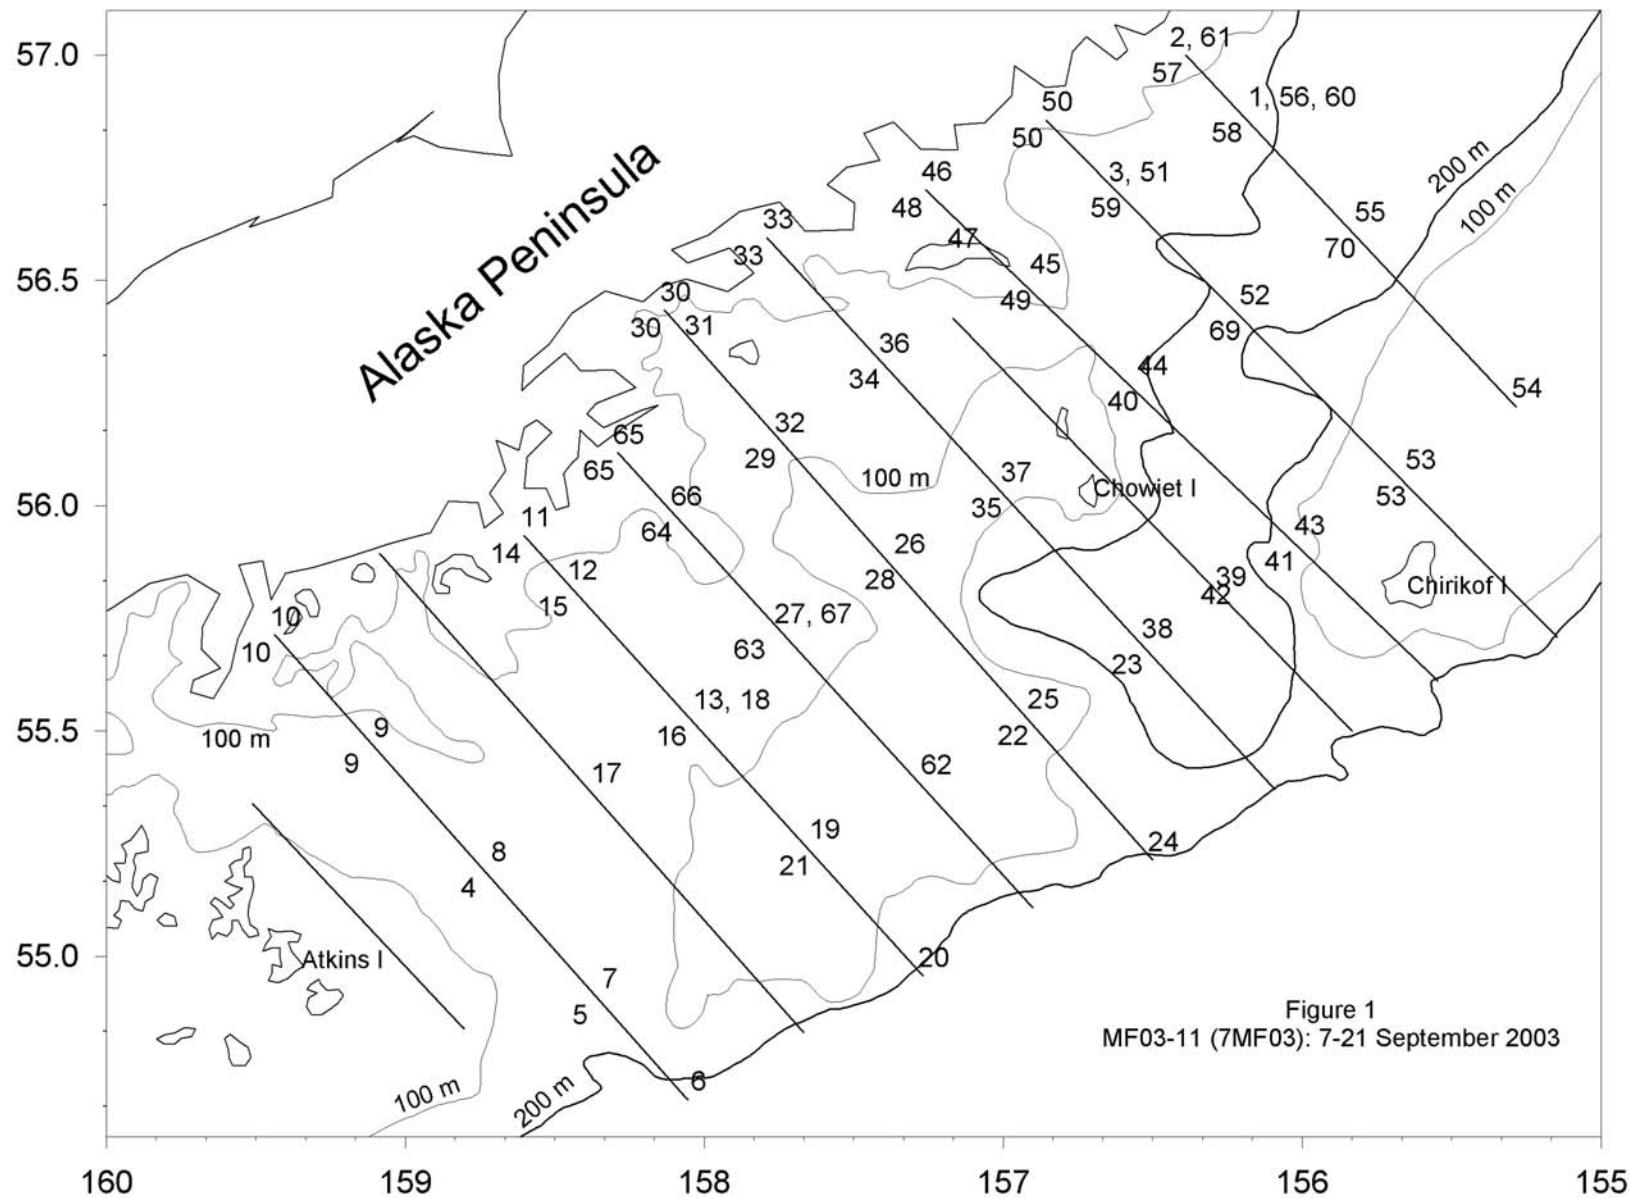

Figure 2. Eight acoustic transects occupied during the cruise MF03-11 (FOCI 7MF03). The thin solid line indicates transect location, the thick offset lines indicate where acoustic data were collected during the day (dashed line) or at night (solid line).
