|                       | Commanding Officer  |

Marine Operations Center - Pacific

### I. Overview

- A. EMA-EcoFOCI Juvenile Walleye Pollock and Forage Fish Survey August 14 September 19, 2013
- B. Service Level Agreements: Of the 33 DAS scheduled for this project, 0 DAS are funded by the program and 33 days are funded by OMAO. This project is estimated to exhibit a High Operational Tempo.
  - C. Operating Area: Gulf of Alaska
  - D. Summary of Objectives

Summary of Objectives: Fisheries (midwater trawl) and oceanographic survey to:

- 1) Extend time series of age-0 walleye pollock abundance off east Kodiak Island and in the Semidi Bank vicinity;
- 2) Describe the community structure, biomass, energetic status of pelagic nekton (capelin, eulachon, Pacific cod, walleye pollock, arrowtooth flounder, sablefish, and rockfishes);
- Collect age-0 pollock-associated prey and measure environmental variables that potentially affect pollock ecology;
- 4) Conduct a series of gear comparison tests to examine catch differences in size composition & abundance for each species between the anchovy tr'awl (aka Stauffer trawl) and the CanTrawl;
- 5) Occupy a series of cross-shelf transects of CTD stations to examine cross-shelf physical and chemical oceanography.
- E. Participating Institutions

NOAA – Alaska Fisheries Science Center (AFSC)
7600 Sand Point Way N.E., Seattle, Washington 98115-0070

NOAA – Pacific Marine Environmental Laboratory (PMEL) 7600 Sand Point Way N.E., Seattle, Washington 98115-0070

NOAA – Alaska Fisheries Science Center (AFSC) TSMRI 17109 Point Lena Loop Road, Juneau, AK, 99801

F. Personnel/Science Party:

- 2. Diplomatic Clearances N/A
- 3. Licenses and Permits

This project will be conducted under the Blanket Scientific Research Permit #2013-B issued by the U.S. on January 14, 2013 effective January 31 – October 14, 2013 to AFSC research personnel and the *Oscar Dyson*. In addition, the State of Alaska Fish Resource Permit CF-13-002 has been granted and is effective February 5, 2013 to December 31, 2015.

### II. Operations

A. Project Itinerary

Departure: August 14, 2013 Kodiak, AK 0900 hours Arrival: August 30, 2013 Kodiak, AK 0900 hours Departure: September 4, 2013 Kodiak, AK 0900 hours Arrival: September 19, 2013 Kodiak, AK 0900 hours

### B. Staging and Destaging

The equipment necessary for the cruise will be shipped to Kodiak and loaded onto **NOAA Ship** *OSCAR DYSON* prior to departure from Kodiak on 14 (Wednesday) August 2013. We request

ship's assistance with loading on August 13, 2013. We will require dedicated use of the chemistry, hydrographic, wet, dry, and fish processing labs for sample and equipment preparation and request as much counter and cabinet space as possible. We will use the Dry lab for SEACAT operations. Gear will remain on board until the **NOAA Ship OSCAR DYSON** arrives in Seattle in October 2013. Samples will be shipped from Kodiak, AK.

## C. 1. Underway Operations -

The ship's Scientific Computer System (SCS) shall operate throughout the cruise, acquiring and logging data from navigation, meteorological, and oceanographic sensors. See FOCI Standard Operating Instructions (SOI 5.2 and SOI 5.3) for specific requirements. We request that the centerboard be DOWN for the duration of the cruise.

2. **Station Operations** – Operations will occur 24/7. *Please advise the science party if 2 survey technicians will not be available for one or both legs of the cruise.* 

Gear Comparison #1: The cruise will begin upon departure from Kodiak, Alaska at 09:00 ADT on 14 August, 2013. Prior to the time of departure the net reels will have been loaded with 1 CanTrawl and 1 anchovy trawl, and the 5m alloy doors will have been prepared for trawling activities. We will proceed to Kalsin Bay to conduct a gear comparison of the CanTrawl and anchovy trawl catch efficiencies. First, two replicate tows will be conducted using the CanTrawl (use and assistance with 3<sup>rd</sup> wire is requested). Either depth-integrated tows or tows targeted on sign will be conducted. Exact tow profile is still in discussion. Upon completion and remaining in the calm waters of Kalsin Bay the 5m alloy doors will be swapped out for the 5x7 doors. We will return to the same coordinates as were sampled using the CanTrawl and 2 replicate tows using the anchovy net will occur. All jellyfish and nektonic animals collected, or a subsample of each species, will be enumerated, weighed, and measured for body size. All, or a subsample, of any miscellaneous other small zooplankton (MOSP) will be frozen. Subsamples of MOSP will amount to about 0.5 l of material and will be selected haphazardly.

YOY Survey: Upon completion of Gear Trial Comparison #1, we will begin sampling ~250 predetermined stations (Figure 1, Table 1). Enroute to the first pre-determined station, the CanTrawl will be removed from the net reel and a backup anchovy trawl will be loaded. At each grid location, a bongo tow will be conducted first to collect zoo- and ichthyoplankton followed by a small-mesh anchovy trawl (Stauffer/anchovy trawl) to sample age-0 walleye pollock and other forage fishes.

The standard gear for plankton sampling will be a 60-cm bongo (SOI 3.2.2) with 0.505-mm mesh netting paired with a 20-cm bongo with 0.153-mm mesh. A FastCat will be mounted above the bongo to provide depth, temperature, and salinity data. Tows will be to 200 meters or 10 meters off the bottom where water depth is shallower.

Two buttons are required:

- 1) Surface (in/out),
- 2) EQ

Marks to the MOA will be made in the Survey Office (Dry Lab) by a scientist on-watch who will be monitoring the FastCat operation throughout the station occupation. The processing of FastCat files and CTD files will be the responsibility of the scientific personnel on watch.

The samples collected from the 20-cm and 60-cm bongos will be processed in the following manner. For each, Net 1 will be preserved in 1.8% formaldehyde, buffered with sodium borate, and boxed. Net 2 (60BON only) samples will be sorted for all fish larvae and preserved in 100% ethanol and/or frozen in the -80 °C freezer, dependent on special requests. Net 2 20BON will be discarded.

### Midwater (anchovy) trawl

The anchovy trawl will be deployed to a depth of 200 meters, or 10 meters, off the bottom, whichever is shallowest. An SBE-39 will be deployed on the headrope as a backup depth sensor. Net depth will be monitored using the ship's Simrad ITI (trawl eye) or FURUNO system. Standard trawl operations will be used for deployment. Once equilibrium is achieved, as determined by the fishing officer or scientist, the trawl will be retrieved at a wire rate of about 10 meters per minute. Thus, the trawl will be fished over a double-oblique path.

Three buttons are required

- 1) Doors (in/out),
- 2) EQ,
- 3) HB

The SBE will be removed and downloaded. Walleye pollock (all age classes), Pacific cod, rockfishes, sablefish, capelin, eulachon, and flatfishes will be sorted from the catch. It is sometimes

necessary to sort walleye pollock into ca. <120 mm SL and ca. >12 cm FL to ensure adequate representation of age-0 and age-1+ components, respectively, in the catch and length data. Flatfishes will be sorted to species if possible. Those individuals <100 mm TL that cannot be ID'ed to species will be bagged and frozen for return to the laboratory. For each of these groups named above, all individuals or a randomly drawn subsample of all individuals will be used to determine length composition. For walleye pollock, approximately 100 age-0 and 100 age-1+ walleye pollock will be measured for body length. Standard length (SL) will be the body-length metric for age-0 walleye pollock. Fork length (FL) will be the body-length metric for age-1+ walleye pollock. Subsampling may be necessary prior to enumerating and measuring individuals. A sample (~25 individuals) of each of the following groups will be frozen for subsequent examination in the laboratory: age-0 walleye pollock, age-0 Pacific cod, and each of the other flatfish species (flatfish <100 mm TL). These will be flash frozen in the -80 °C freezer and then moved to the -20 °C freezer. Excluding gelatinous zooplankton, which will be quantified, all zooplankton will be collectively weighed as MOSP and discarded. Note, the MOSP often includes fishes that appear to be larvae; these fishes can be highly abundant and vary in size (e.g., Lumpenus spp., <7 cm TL).

CTD transects: Selected transects will also be occupied for CTD cross-shelf analysis (Figure 2). At each transect location a CTD (with bottles) will be conducted. All hydrographic casts include high-resolution vertical profiling of water properties (including temperature, salinity, chlorophyll fluorescence, PAR, dissolved O<sub>2</sub>) to within 10 m of the bottom using a Seabird 911Plus CTD. Oxygen samples will be titrated on board to ensure quality of data from the CTD oxygen sensors (DeWitt Leg 1, Proctor Leg 2). Nutrient and chlorophyll samples will be collected onboard and frozen for analysis at a later date at the NOAA laboratories in Seattle. CTD transects will be occupied weather and time permitting.

#### Gear Comparison #2:

Upon completion of the YOY Survey, we will proceed to Kalsin Bay and conduct another gear comparison of the anchovy trawl and Can Trawl catch efficiencies. En route to Kalsin Bay, 1 anchovy trawl will be removed from the net reel, and the CanTrawl with spectra bridles will be reloaded. First, two replicate tows will be conducted using the anchovy trawl (use and assistance with 3<sup>rd</sup> wire is requested). Either depth-integrated tows or tows targeted on sign will be conducted. Exact tow profile is still in discussion. Upon completion of tows, and remaining in the calm waters of Kalsin Bay, the 5x7 doors will be swapped out for the 5m alloy doors. We will return to the same coordinates as were sampled using the anchovy trawl and 2 replicate tows using the CanTrawl will occur. If time permits, additional tows might be undertaken for the gear comparison project, weather and CO approval permitting.

### D. Dive Plan N/A

### E. Applicable Restrictions

Conditions that could preclude normal operations would be poor weather and equipment failure. Poor weather would be waited out in a sheltered area until operations could be resumed and modifications would be made to the sampling grid. Sheltered areas are of scientific interest; therefore, while waiting out poor weather, the Chief Scientist may request sampling operations to assess local physical conditions, zooplankton, and fish populations. Equipment failure would have to be addressed immediately for the project to continue.

### III. Equipment

### 1. Acoustic Equipment

- GPS with NEMA 183 to ER60 (2)
- 50/200 kHz ES60 Bridge sounder
- Furuno FE-700 fathometer
- Acoustic echosounders (5)

#### 2. Trawling Equipment

- 3rd wire FS-70 net sonar with winch and accessories (2)
- Simrad ITI net mensuration system (2)
- Furuno CN24-40 headrope transducer
- Stern trawl capabilities for trawling

#### 3. Oceanographic Equipment

- Both starboard oceanographic winches with conducting cable, slip rings and blocks. Forward winch terminated for CTD/rosette; aft winch terminated for FastCat.
- Seabird SBE 911+CTD System
- Seabird SBE19+CTD and PDIM for real time data on zooplankton tows
- SBE45 Thermosalinograph with fluorometer
- Power source for ISUS
- Wire speed indicators and readout for both hydrographic winches visible in Dry Lab or where SEACAT operations occur
- Weather instr. for above surface PAR, wind speed/direction

- Ship's crane and A-frame for recovering moorings
- 4. Biological Sampling Equipment
  - Fish lab conveyor system
  - Catch sorting and weighing table
  - Calibrated Marel M60 60kg scale (2)
  - Calibrated Marel M60 6kg scale (2)
  - Large gray tubs for dumping catch into (2)
- 5. Computing equipment
  - Scientific Computing System
- 6. Sample storage equipment
  - Supercold freezer (-80C)
  - Walk in freezer (-10C)
  - Stand up freezer (-20C)
  - Hazmat storage cabinets
- 7. Laboratory and exterior working space
  - Use of Pentium PC in Dry and/or Computer Lab for data analysis,
  - Access in the computer lab to fastcat data stored in the survey lab.
  - Scientific Computer System (SCS)
  - Video monitors in Dry, Chemistry, and Wet labs for viewing SCS and Electronic MOA output
  - Laboratory space with exhaust hood, sink, lab tables, and storage space
  - Sea-water hoses and spray nozzles to wash nets (quarterdeck and aft deck),
  - Adequate deck lighting for night-time operations,
  - Navigational equipment including GPS and radar,
  - Safety harnesses for working on starboard sampling station/hero platform and fantail
  - Ship's crane(s) used for loading and/or deploying gear and supplies
- B. Equipment and Capabilities Provided by the Scientists (itemized)
  - 1. Acoustic Equipment (500lbs)
  - 2. Trawling Equipment
    - Cantrawl mid water trawl w/accessories (e.g., 2.0cm mesh liners,) (2); 7,000lbs

- Spectra bridles (60 m); 300lbs
- NETS 5.0m doors with accessories (2 sets); 3,000lbs
- Small-mesh midwater trawls (Stauffer, a.k.a. anchovy) equipped with 3-mm (1/8") mesh codend liner,
- Bridles for anchovy trawl
- Bottom trawl (high-opening shrimp) with 3-mm (1/8") mesh codend liner (trawl without tickler chain),
- Two pair steel-v trawl doors (each door: 5'x7', 1250 lbs),
- Spare webbing & twine
- Spare hardware
- All accessories to make trawls fishable and spare web if available

### 3. Oceanographic Equipment (1,500lbs)

- Biospherical SP2300 PAR sensor
- Wet labs ECO Fluorometer and turbidity sensor (FL-NTU)
- Wet labs C-start Transmissometer
- SBE 43 dissolved oxygen sensor (2)
- pH sensor
- Secondary TC sensors for SBE 911+
- SBE 19Plus SeaCat
- SBE 49 FastCat
- Niskin Bottles 10 L (need 10 total+ spares)
- Satlantic ISUS Nitrate Analyzer w/battery, cabling, power source (backup)
- Filter racks and pumps (3)
- Nutrient auto-analyzer and associated equipment (to be set up on center island in chem. lab for on-board nutrient analysis)
- Turner 700 fluorometer, sonicator, centrifuge (for on-board chla analysis)
- 20 & 60 cm Bongo frames, 505, 153 mesh nets, cod ends, weights, and flowmeters
- Two wire-angle indicators
- Biological supplies (misc.) \*

### 4. Biological Sampling Equipment (500lbs)

- Dynamometer
- Mechanical platform scale (2)

- Fish baskets (30)
- 5. Miscellaneous scientific sampling and processing equipment
  - Fish baskets (12, MACE),
  - Dishpans (10, MACE),
  - 5-gal buckets (5),
  - Wading pools (small and large),
  - Two length boards for adult fish,
  - Three length boards for small fish,
  - SBE-39 temperature and depth sensor (MACE) for beam trawl
  - Triple-beam balance for small fish weights,
  - 2000 Zip-loc bags (12"),
  - Sieves, jar holder, funnels, squirt bottles,
  - 70 cases of 32-oz jars, closures, and labels,
  - 10 flowmeters, calibration data, hardware for attaching and maintaining them,
  - Preservative-dispenser equipment,
  - Hazardous materials spill kit, and
  - Spare wire angle indicator
- 6. Computing equipment (50lbs)
  - IBM compatibles w/XP Op.System\*
  - Printers\*
  - Laptops
  - Cruise Operations Database (COD) software
  - Electronic (MS Excel) and paper forms: Haul, Catch, and Length

### IV. Hazardous Materials

### A. Policy and Compliance

The Chief Scientist is responsible for complying with FEC 07 Hazardous Materials and Hazardous Waste Management Requirements for Visiting Scientific Parties (or the OMAO procedure that supersedes it). By Federal regulations and NOAA Marine and Aviation Operations policy, the ship may not sail without a complete inventory of all hazardous materials by name and the anticipated quantity brought aboard, MSDS and appropriate neutralizing agents, buffers, or absorbents in amounts adequate to address spills of a size equal to the amount of chemical brought aboard, and a chemical hygiene plan (see Appendix 2 for Chemical Hygiene Plan and SOPs. All FOCI personnel on this survey are trained to manage and respond to spills for the chemicals listed below in the Inventory).

Documentation regarding those requirements will be provided by the Chief of Operations, Marine Operations Center, upon request.

Upon departure from the ship, scientific parties will provide the CO or their designee an inventory of hazardous material indicating all materials have been used or removed from the vessel. The CO's designee will maintain a log to track scientific party hazardous materials. MSDS will be made available to the ship's complement, in compliance with Hazard Communication Laws.

Overboard discharge of scientific chemicals is not permitted during projects aboard NOAA ships.

B. Radioactive Isotopes N/A

C. Inventory (itemized)

| Common<br>Name            | Concentration | Amount     | Spill Response<br>(all FOCI<br>personnel)           | Notes   |

### V. Additional Projects

- A. Supplementary ("Piggyback") Projects N/A
- B. NOAA Fleet Ancillary Projects

## VI. Disposition of Data and Reports

- A. Data Responsibilities
- B. Pre and Post Project Meeting

Prior to departure, the Chief Scientist will conduct a meeting of the scientific party to train them in sample collection and inform them of cruise objectives. Some vessel protocols, e.g., meals, watches, etiquette, etc. will be presented by the ship's Operations Officer. Post-Project Meeting: Upon completion of the project, a meeting will normally be held at 0830 (unless prior alternate arrangements are made) and attended by the ship's officers, the

Chief Scientist and members of the scientific party to review the project. Concerns regarding safety, efficiency, and suggestions for improvements for future projects should be discussed. Minutes of the post-cruise meeting will be distributed to all participants by email, and to the Commanding Officer and Chief of Operations, Marine Operations Center.

### C. Ship Operation Evaluation Report

Within seven days of the completion of the project, a Ship Operation Evaluation form is to be completed by the Chief Scientist. The preferred method of transmittal of this form is via email to <a href="mailto:omao.customer.satisfaction@noaa.gov">omao.customer.satisfaction@noaa.gov</a>. If email is not an option, a hard copy may be forwarded to:

Director, NOAA Marine and Aviation Operations NOAA Office of Marine and Aviation Operations 8403 Colesville Road, Suite 500 Silver Spring, MD 20910

#### VII. Miscellaneous

### A. Meals and Berthing

Meals and berthing are required for up to \_8\_ scientists per leg. Meals will be served 3 times daily beginning one hour before scheduled departure, extending throughout the project, and ending two hours after the termination of the project. Since the watch schedule is split between day and night, the night watch may often miss daytime meals and will require adequate food and beverages (for example a variety of sandwich items, cheeses, fruit, milk, juices) during what are not typically meal hours. Special dietary requirements for scientific participants will be made available to the ship's command at least seven days prior to the survey.

Berthing requirements, including number and gender of the scientific party, will be provided to the ship by the Chief Scientist. The Chief Scientist and Commanding Officer will work together on a detailed berthing plan to accommodate the gender mix of the scientific party taking into consideration the current make-up of the ship's complement. The Chief Scientist is responsible for ensuring the scientific berthing spaces are left in the condition in which they were received; for stripping bedding and linen return; and for the return of any room keys which were issued. The Chief Scientist is also responsible for the cleanliness of the laboratory spaces and the storage areas utilized by the scientific party, both during the cruise and at its conclusion prior to departing the ship.

All NOAA scientists will have proper travel orders when assigned to any NOAA ship. The Chief Scientist will ensure that all non NOAA or non Federal scientists aboard also have proper orders. It is the responsibility of the Chief Scientist to ensure that the entire scientific party has a mechanism

in place to provide lodging and food and to be reimbursed for these costs in the event that the ship becomes uninhabitable and/or the galley is closed during any part of the scheduled project.

All persons boarding NOAA vessels give implied consent to comply with all safety and security policies and regulations which are administered by the Commanding Officer. All spaces and equipment on the vessel are subject to inspection or search at any time. All personnel must comply with OMAO's Drug and Alcohol Policy dated May 7, 1999 which forbids the possession and/or use of illegal drugs and alcohol aboard NOAA Vessels.

## B. Medical Forms and Emergency Contacts

The NOAA Health Services Questionnaire (NHSQ, Revised: 02 JAN 2012) must be completed in advance by each participating scientist. The NHSQ can be obtained from the Chief Scientist or the NOAA website <a href="http://www.corporateservices.noaa.gov/~noaaforms/eforms/nf57-10-01.pdf">http://www.corporateservices.noaa.gov/~noaaforms/eforms/nf57-10-01.pdf</a>. The completed form should be sent to the Regional Director of Health Services at Marine Operations Center. The participant can mail, fax, or scan the form into an email using the contact information below. The NHSQ should reach the Health Services Office no later than 4 weeks prior to the cruise to allow time for the participant to obtain and submit additional information that health services might require before clearance to sail can be granted. Please contact MOC Health Services with any questions regarding eligibility or completion of the NHSQ. Be sure to include proof of tuberculosis (TB) testing, sign and date the form, and indicate the ship or ships the participant will be sailing on. The participant will receive an email notice when medically cleared to sail if a legible email address is provided on the NHSQ

#### Contact information:

Regional Director of Health Services
Marine Operations Center - Pacific
2002 SE Marine Science Dr.
Newport, OR 97365
Telephone 541-867-8822
Fax 541-867-8856
Email MOP.Health-Services@noaa.gov

Prior to departure, the Chief Scientist must provide an electronic listing of emergency contacts to the Executive Officer for all members of the scientific party, with the following information: contact name, address, relationship to member, and telephone number.

### C. Shipboard Safety

Wearing open-toed footwear or shoes that do not completely enclose the foot (such as sandals or clogs) outside of private berthing areas is not permitted. Steel-toed shoes are required to participate in any work dealing with suspended loads, including CTD deployments and recovery. The ship does not provide steel-toed boots. Hard hats are also required when working with suspended loads. Work vests are required when working near open railings and during small boat launch and recovery operations. Hard hats and work vests will be provided by the ship when required.

#### D. Communications

A progress report on operations prepared by the Chief Scientist may be relayed to the program office. Sometimes it is necessary for the Chief Scientist to communicate with another vessel, aircraft, or shore facility. Through various means of communications, the ship can usually accommodate the Chief Scientist. Special radio voice communications requirements should be listed in the project instructions. The ship's primary means of communication with the Marine Operations Center is via e-mail and the Very Small Aperture Terminal (VSAT) link. Standard VSAT bandwidth at 128kbs is shared by all vessels staff and the science team at no charge. Increased bandwidth in 30 day increments is available on the VSAT systems at increased cost to the scientific party. If increased bandwidth is being considered, program accounting is required it must be arranged at least 30 days in advance.

### E. IT Security

Any computer that will be hooked into the ship's network must comply with the *NMAO Fleet IT Security Policy* 1.1 (November 4, 2005) prior to establishing a direct connection to the NOAA WAN. Requirements include, but are not limited to:

- (1) Installation of the latest virus definition (.DAT) file on all systems and performance of a virus scan on each system.
- (2) Installation of the latest critical operating system security patches.
- (3) No external public Internet Service Provider (ISP) connections.

Completion of these requirements prior to boarding the ship is required.

Non-NOAA personnel using the ship's computers or connecting their own computers to the ship's network must complete NOAA's IT Security Awareness Course within 3 days of embarking.

F. Foreign National Guests Access to OMAO Facilities and Platforms

All foreign national access to the vessel shall be in accordance with NAO 207-12 and RADM De Bow's March 16, 2006 memo (<a href="http://deemedexports.noaa.gov">http://deemedexports.noaa.gov</a>). National Marine Fisheries Service personnel will use the Foreign National Registration System (FRNS) to submit requests for access to NOAA facilities and ships. The Departmental Sponsor/NOAA (DSN) is responsible for obtaining clearances and export licenses and for providing escorts required by the NAO. DSNs should consult with their designated NMFS Deemed Exports point of contact to assist with the process.

The following are basic requirements. Full compliance with NAO 207-12 is required.

### Responsibilities of the Chief Scientist:

- Provide the Commanding Officer with the e-mail generated by the FRNS granting approval for the foreign national guest's visit. This e-mail will identify the guest's DSN and will serve as evidence that the requirements of NAO 207-12 have been complied with.
- Escorts The Chief Scientist is responsible to provide escorts to comply with NAO 207-12 Section 5.10, or as required by the vessel's DOC/OSY Regional Security Officer.
- 3. Ensure all non-foreign national members of the scientific party receive the briefing on Espionage Indicators (NAO 207-12 Appendix A) at least annually or as required by the servicing Regional Security Officer.
- 4. Export Control The NEFSC currently neither possesses nor utilizes technologies that are subject to Export Administration Regulations (EAR).

The Commanding Officer and the Chief Scientist will work together to implement any access controls necessary to ensure no unlicensed export occurs of any controlled technology onboard regardless of ownership.

### Responsibilities of the Commanding Officer:

- 1. Ensure only those foreign nationals with DOC/OSY clearance are granted access.
- Deny access to OMAO platforms and facilities by foreign nationals from countries controlled for anti-terrorism (AT) reasons and individuals from Cuba or Iran without written NMAO approval and compliance with export and sanction regulations.
- 3. Ensure foreign national access is permitted only if unlicensed deemed export is not likely to occur.

- 4. Ensure receipt from the Chief Scientist or the DSN of the FRNS e-mail granting approval for the foreign national guest's visit.
- 5. Ensure Foreign Port Officials, e.g., Pilots, immigration officials, receive escorted access in accordance with maritime custom to facilitate the vessel's visit to foreign ports.
- 6. Export Control 8 weeks in advance of the cruise, provide the Chief Scientist with a current inventory of OMAO controlled technology onboard the vessel and a copy of the vessel Technology Access Control Plan (TACP). Also notify the Chief Scientist of any OMAO-sponsored foreign nationals that will be onboard while program equipment is aboard so that the Chief Scientist can take steps to prevent unlicensed export of Program controlled technology. The Commanding Officer and the Chief Scientist will work together to implement any access controls necessary to ensure no unlicensed export occurs of any controlled technology onboard regardless of ownership.
- Ensure all OMAO personnel onboard receive the briefing on Espionage Indicators (NAO 207-12 Appendix A) at least annually or as required by the servicing Regional Security Officer.

### Responsibilities of the Foreign National Sponsor:

- 1. Export Control The foreign national's sponsor is responsible for obtaining any required export licenses and complying with any conditions of those licenses prior to the foreign national being provided access to the controlled technology onboard regardless of the technology's ownership.
- 2. The DSN of the foreign national shall assign an on-board Program individual, who will be responsible for the foreign national while on board. The identified individual must be a U.S. citizen, NOAA (or DOC) employee. According to DOC/OSY, this requirement cannot be altered.
- 3. Ensure completion and submission of Appendix C (Certification of Conditions and Responsibilities for a Foreign National

Appendices

### 2. Chemical Hygiene Plan and Standard Operating Procedures (SOPs)

### Appendix 2 – Chemical Hygiene Plan

Previous sections of the Project Instructions include a list of hazardous materials by name and anticipated quantity. Chemicals will be transported, stored and used in a manner that will avoid any spills and adequate containment, absorbents and cleanup materials will be available in the event of a chemical spill.

The scientific chemicals to be used for this project are: (1) ethyl alcohol (100%) and (2) formaldehyde (37%). Other chemicals brought aboard are consumer products in consumer quantities. Dilutions of the scientific chemicals will be used to preserve in faunal organisms collected with benthic grab samplers, as described in the Operations section of these Project Instructions. Use of these chemicals and the specified dilutions will only occur in exterior locations on the ship away from air intakes. Scientific chemicals shall not be disposed over the side.

Standard Operating Procedures and Information Sheets are provided here for the scientific chemicals. Included are details concerning personal protective equipment, work area precautions, special handling and storage requirements, spill and accident procedures/first aid, waste disposal and other pertinent information. Both small and large spills are of particular concern. In both cases, the spill response is intended to first contain the spill and then neutralize it. This may be easily accomplished for small spills depending on the degree of vessel motion and the prevailing environmental conditions. In all cases, the first responder should quickly evaluate the risks of personal exposure versus the potential impacts of a delayed response to the spill and act accordingly. For example, if the spill is small and it is safe to do so, a neutralizing agent should be rapidly applied to encircle/contain the spill and then cover it. However, a large formaldehyde spill (> 1 L) is extremely hazardous and individuals at risk of exposure should immediately leave the area. The CO or OOD should be notified immediately so that a response team with selfcontained breathing apparatus (SCBA) can be deployed to complete the cleanup operation or dispense the hazard with a fire hose directed overboard. The vessel's course should be adjusted to minimize exposure of personnel to wind-driven vapors and to limit spread of the spill due to vessel motion. The reportable quantity (RQ) of formaldehyde is 1,000 pounds and the RO for ethyl alcohol is 5,000 pounds which greatly exceed the quantities brought aboard for this project.

Standard Operating Procedures - Formaldehyde At-Sea

Chemical Name: 37% Formaldehyde

UN Number: 1198

Hazard Ratings: (on a scale of 0 to 4)

Health (blue): 3

Flammability (red): 2

Reactivity (yellow): 2

Special (white):

## Personal Protection Gear Needed

\*gloves

\*goggles or face shield

## Special Handling Instructions

- \* If a ventilation hood is not available, then pouring of chemical must be done outside. At least two people should be involved with large chemical transfers in case of an emergency.
- \* Chemical must be stored at temperatures above 15° c to prevent polymerization of paraformaldehyde.

### First Aid

- \* If swallowed, give large amounts of drinking water and induce vomiting.
- \*If vapors inhaled, get out into fresh air immediately. Give oxygen if breathing is difficult.
- \* If spilled on skin or splashed in eyes, flush with water for at least 15 minutes.

## Spill Cleanup Procedures

# For small spills (500-1000 mls):

Cover spill quickly with a Fan Pad and spray on Formalex to deactivate and absorb chemical. Let material sit for 10 - 15 minutes. Dispose of materials in plastic bag.

# For large spills (1000 mls - ?):

Use a combination of Fan Pads and Formalex as quickly as possible to contain spill and deactivate it. Vacate area and try to ventilate room, if possible. Call Bridge immediately. Deactivation/Disposal Procedures At Sea

\*Formalex is a greenish liquid that is to be used to insure proper chemical deactivation. Formalex should also be used in conjunction with Fan Pads. Place used Fan Pad in plastic bag, seal, and put in bottom of Spill Kit.

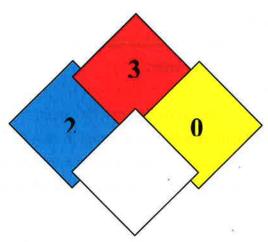

\*Fan Pads may be used to absorb small spills alone but these pads work best when used with Formalex to immediately control the vapor layer.

## Shipping Procedures and Restrictions

37% formaldehyde cannot be ship by air due to its flammability rating.

All quantities should be over-packed with absorbency material in case the original container is damaged. When shipping by barge or land, labels are not required for quantities under 110 gallons by D.O.T. but the container should have MSDSs and the UN number readily available.

### Standard Operating Procedures - Ethanol At-Sea

Chemical Name: 100% Alcohol

UN Number: 1170

Hazard Ratings: (on a scale of 0 to 4)

Health (blue): 2

Flammability (red): 3

Reactivity (yellow): 1

Special (white):

## Personal Protection Gear Needed

\*gloves

\*goggles or face shield when pouring

### **Special Handling Instructions**

- \* Keep away from heat, flame, and other potential ignition sources.
- \* Store in a well ventilated area or in a flammable cabinet.

#### First Aid

- \* If swallowed, give large amounts of drinking water and induce vomitting.
- \* If vapors inhaled, get out into fresh air immediately. Give oxygen if breathing is difficult.
- \* If spilled on skin or splashed in eyes, flush with water for at least 15 minutes.

### Spill Cleanup Procedures

Absorb ethanol with 3M Sorbent Pads and allow to dry in a well ventilated area away from ignition source.

## Deactivation/Disposal Procedures At Sea

Use 3M Sorbent Pads to absorb the ethanol. Put used pads outside to dry (secure from blowing overboard and exposure to flame). Once dry, the pads may be reused or burned. Shipping Procedures and Restrictions

Due to the flammability rating of 95% ethanol, this chemical cannot be shipped by air. Transportation by barge or land vehicle will require the ethanol container to be overpacked with absorbent materials such as clumping kitty litter or shredded paper. Include MSDSs and the UN number with the shipment for reference in the event of a spill.
